

## EXECUTING CODE COVERAGE INSTRUCTIONS (Starting at the root file)

1. Install the required coverage tool (pip install coverage)
2. Change into the app directory (cd app)
3. Run the tests and measure coverage
  - a. Exclude init\_database.py from the coverage report (coverage run --omit="\*/init\_database.py" -m unittest discover)
  - b. Generate a summary of the coverage (coverage report)
4. Generate the html coverage report (coverage html)
5. Open the html report
  - a. Navigate to the htmlcov folder (cd htmlcov)
  - b. Open the index.html file (open index.html)
